

Installation of Tie-Wrap Blazes

1. Thread tie-wraps through slots in blaze as shown above. The ratchet teeth on the tie-wrap face toward the pole.
2. Position the tie-wraps so that the ratchet head is about halfway behind the pole.
3. Place double-sided sticky tape on tie-wraps in back of the blaze, and remove the paper covering on tape to expose the adhesive. Note that this is needed so that kids with itchy figures do not rotate the blaze on the pole on a hot summer day.
4. Place blaze on the pole, insert tie-wrap ends into ratchet head and hand tighten.
5. With diagonal cutters, clip off ends of tie-wraps and leave about 1/2" exposed.
6. Tighten with locking pliers (Vice-Grip) by using the ratchet head as a pivot point. Do not use regular pliers because you will not be able to get it tight enough.
7. Cut off the end of tie wraps as closely to the ratchet head as possible.
